

CCASNZ4702 CABLE COVER

- EXCEEDS REQUIREMENTS OF PENETRATION TEST

Once it's buried it's forgotten, right??? That's until an unsuspecting member of the public happens upon it when they're landscaping or fixing a water pipe. Let's face it, New Zealand is a nation of do-it-yourselfers. We like to give anything a go. That's why it's important to protect both the cable and the public.

In 2000 an Australian Standard (AS4702-2000) was introduced to ensure quality of Polymeric Cable Cover. It includes a very important penetration test. New Zealand has adopted this same standard.

TransNet (in conjunction with Astron Plastics) offers a superior, consistent quality cable cover which exceeds the penetration requirements of AS4702-2000. The reason is no doubt due to the expertise of Astron Plastics who manufacture the cable cover exclusively for TransNet. Astron has considerable experience in

plastics manufacturing.

Cable Cover gets its strength from the quality of the raw materials. The better the quality, the thinner it can be whilst maintaining strength. TransNet cable cover is manufactured from the highest quality recycled Polyethylene Plastic.

'It's not about how thick it is - it's about how strong it is.'

IN ORDER TO COMPLY WITH ASNZ4702, CABLE COVER MUST, AMONG OTHER REQUIREMENTS;

- Be consistently strong throughout the body of the product.
- Show manufacturer, supplier and applicable standard on the top laminate.
- Pass a penetration test allowing no more than 50mm penetration.

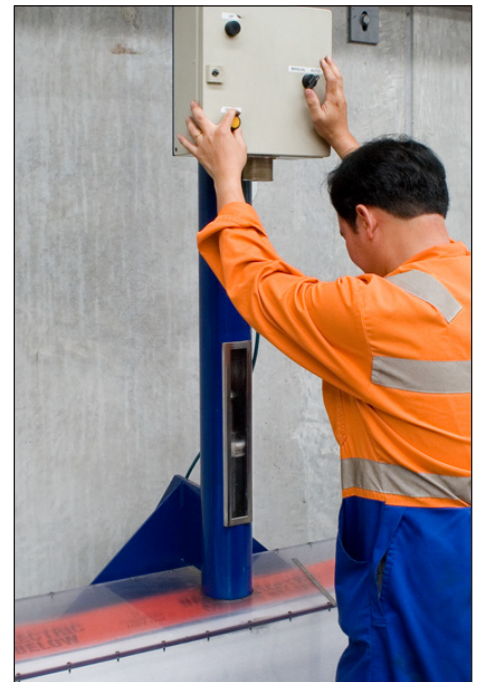

WHY IS TRANSNET CABLE COVER BETTER;

- NZ made from recycled and recyclable plastic
- Post manufacture clean scrap plastic only
- No contaminants
- Thinner, lighter & consistently stronger, complying with penetration requirements of the ASNZ4702 standard
- Custom widths available (Conditions apply)

Common sizes of CCASNZ4702 cable cover are listed in the table below;

| CAT NO. | TYPE | LENGTH | WIDTH |
|-------------------|-------|--------|-------|
| CCASNZ4702-100X25 | ROLL | 25M | 100mm |
| CCASNZ4702-150X1 | STRIP | 1M | 150mm |
| CCASNZ4702-150X25 | ROLL | 25M | 150mm |
| CCASNZ4702-170X2 | STRIP | 2M | 170mm |
| CCASNZ4702-170X25 | ROLL | 25M | 170mm |
| CCASNZ4702-200X25 | ROLL | 25M | 200mm |
| CCASNZ4702-250X2 | STRIP | 2M | 250mm |
| CCASNZ4702-250X25 | ROLL | 25M | 250mm |
| CCASNZ4702-300X2 | STRIP | 2M | 300mm |
| CCASNZ4702-300X25 | ROLL | 25M | 300mm |
| CCASNZ4702-300X75 | ROLL | 75M | 300mm |

Note: Custom sizes are available on request. Non stock products incur MOQ's. When ordering please ask for CCASNZ4702 cable cover.

Testing of TransNet Cable Cover is undertaken throughout the manufacturing process.

Each batch is tested before, during and after the production run. The test strips are stored at Astron in case they are required at any point in the future.

Each test strip is punched in

five places along the length and breadth of the sample.

Test results must be consistent and always under the maximum 50mm puncture tolerance.

The quality of the finished product is dependant on the quality of the materials used in it's production – Astron

uses only the highest quality recycled plastic in the production of TransNet CCASNZ4702 Cable Cover.
